DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/17/09 has been entered.

Response to Amendment

Claim 1 has been amended to incorporate the indicated allowable subject matter of Claim 2. Claim 3 has been further amended to place the claim in condition for allowance; accordingly the rejection of amended Claim 3 has been withdrawn.

Allowable Subject Matter

Claims 1 and 3-4 are allowed. The following is an examiner's statement of reasons for allowance:

With respect to Claim 1, the prior art does not disclose or suggest, in combination with the limitations of the base claim and any intervening claims, primarily, wherein a resonance converter, the resonance converter comprising at least two serial coupled semiconductor switches, wherein a second feedback circuit, the second feedback circuit comprises at least one second capacitor connected to a second input terminal of the control circuit, the second feedback circuit is connected to a capacitive divider including a third capacitor and a fourth capacitor in series, the fourth capacitor is connected to

common ground and the third capacitor is connected to the first capacitor, wherein the midpoint of the capacitive divider is connected to a further capacitor and resistor in parallel connected to the second feedback circuit, and the second feedback circuit transmits a feedback signal from the first capacitor, the first capacitor is serially connected to the second coil and to ground, the second capacitor controls a switching frequency of the semiconductor switches, the second feedback circuit transmits the feedback signal depending on an actual change of charge of the first capacitor in each half period of switching of the first capacitor, and the feedback signal linearizes the influence of the first feedback circuit.

With respect to Claim 3, the prior art does not disclose or suggest, in combination with the limitations of the base claim and any intervening claims, primarily, wherein a resonance converter, the resonance converter comprising at least two serial coupled semiconductor switches, wherein a first feedback circuit connects one of the output terminals to an error amplifier, the error amplifier is connected to a first input terminal of a control circuit, the control circuit comprises an output that is connected over driver means to an input of the semiconductor switches, a second feedback circuit, wherein the second feedback circuit comprises at least one second capacitor connected to a second input terminal of the of the control circuit, wherein the second feedback circuit comprises an inverting amplifier, and an output of the inverting amplifier is connected to the second input terminal through the second capacitor.

The aforementioned limitations in combination with all remaining limitations of the respective claims are believed to render the aforementioned indicated claim and any dependent claims thereof patentable over the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
